Activity Introduction

Our school specially organized an experiential activity for the children at Tai Po Waterfront Park. By observing and exploring the flower fields and insect museum firsthand, the children have learned about Hong Kong's natural environment and various plants and animals. Through appreciating the beauty of nature, it helps the children foster an attitude of caring for the natural world.

Additionally, the children enjoyed the fun of an outdoor picnic. Teachers guided them to prepare supplies, such as water bottles and lunch boxes together with their parents. Therefore, the children could share healthy snacks with their peers. This helps raise their environmental awareness and encourages them to practice eco-friendly habits in their daily lives.

## Learning Outcomes

- By observing a sea of flowers, the children have learned about the shapes of different flowers and leaves and gained an understanding of the relationship between insects and plants.
- By observing various specimens in the insect museum, our children have learned about different types of insects and gained more understanding of the appearances and characteristics.
- Through exploratory activities, our children could document the insects they had found, enhancing their understanding of the appearances and characteristics of different insects.
- During the picnic, from preparing supplies to cleaning up afterward, our children practiced eco-friendly living.

## Photos

The children explored a sea of flowers and the insect museum.

# Photos

The children worked together to identify target species and record observation.

The children enjoyed a picnic and played together outdoors.
